

We have parlayed our years of experience in short-term subacute care & rehabilitation into the development of a special ORTHOPEDIC REHAB program.

As a direct result of today's improved technology, we are seeing an increase in younger patients who have undergone joint replacement. Our program caters to the specific needs of this population and our goal is to put our patients back into the community as soon as possible. Our outstanding team of skilled therapists have years of experience in orthopedic rehab and a keen understanding of these patients' needs.

We accept Medicare, Medicaid and most insurance plans, and are responsive to your personal needs.

● SHORT-TERM REHAB ● SPECIALIZED ORTHOPEDIC REHAB

Successfully Returning our Patients to the Community

In our newly renovated & spacious rehab room, patients undergo intense rehabilitation & gradual reconditioning for a host of conditions including

- Sports Injuries
- Joint Replacement
- Fractures/Multiple Trauma
- Post Amputation
- Post Stroke
- Cardiac and Respiratory Recovery

THIS NEWLY LAUNCHED PROGRAM is under the direction of a renowned orthopedic surgeon who specializes in total joint replacement. We also have an Orthopedic Physician's Assistant who visits regularly to coordinate treatment.

A multi-tiered interdisciplinary approach is integral to the **SUCCESSFUL REHABILITATION** of our patients.

Our team includes Physical Therapists, Occupational Therapists, Speech Language Pathologists and Physiatrists.

(A Physiatrist is an MD trained in Physical Medicine and Rehabilitation.)

Our patients are fully engaged in their rehabilitative process, playing a central role in their plan of care from admission through discharge.

Aggressive therapy is provided daily, including weekends, for as many hours as needed. As our patients progress and make strides in their strength, endurance and mobility – we encourage them to get back to their lives and loved ones at the earliest possible moment.

OUR CARE PLANS ARE TAILOR-MADE FOR EACH PATIENT as they strive to attain their highest level of independence.

Responding to the particular needs of the younger, more active patient, who is intent on returning to work and family as soon as possible, as well as the special concerns of the geriatric patient – our Rehab program is noted for its keen sensitivity.

Doctors throughout the tri-state area send their patients our way, knowing we treat our patients with the utmost quality and care.
